

Matimu Myrieck Ndlamini

Full-Stack & AI Automation Engineer

MTN (March 2026 – present)

Designed and delivered end-to-end intelligent automation solutions using Python to reduce manual effort and improve efficiency across finance operations.

Developed intelligent document processing pipelines using OCR (Tesseract) and OpenCV to extract, structure, and validate data from invoices and PDF documents.

Built AI-assisted invoice validation and automated payment workflow systems to improve accuracy, reduce processing time, and enhance operational reliability.

Automated key finance processes including invoice processing, reconciliation, and reporting, significantly reducing manual intervention and human error.

Developed desktop and web automation bots using PyAutoGUI, TagUI, and Power Automate to streamline repetitive business tasks across operational teams.

Implemented data extraction and transformation pipelines integrating PDF data into Excel-based reporting systems and dashboards for business visibility.

Collaborated with finance and operations stakeholders to identify automation opportunities, analyze as-is processes, and design optimized to-be solutions.

Implemented CI/CD pipelines using GitHub Actions to automate testing, integration, and deployment of Python-based automation applications.

Applied Git-based workflows for version control, collaborative development, and structured release management.

Salesforce Engineer & DevOps Engineer

Quarphix Corporate (March 2024 – Feb 2026)

Implemented and enhanced features across Salesforce Sales Cloud, Service Cloud, and Marketing Cloud, focusing on scalable, maintainable solutions

SKILLS

RPA

Python

Salesforce
development

Javascript

node.js

Apex

N8N

Django Rest
Framework

AWS
(EC2,ECS,cloud
Watch,ALB,D
ashboards)

Lightning
Web
Component

Terraform

Docker

React

Next.js

aligned with business requirements

REST Api

Developed and customized Lightning Web Components (LWC) and frontend features using JavaScript, HTML, CSS, with strong emphasis on debugging, performance optimization, and bug fixing

Oracle cloud

Built and maintained frontend applications using JavaScript and Vue.js, integrating with Salesforce and external systems via REST APIs

Html

Tailor wind
css

Designed and optimized backend logic using Apex classes, triggers, Flows, Validation Rules, and custom objects, ensuring data integrity and reliable automation

Process
Automation

Integrated Salesforce with external React- and Vue-based applications using RESTful services, enabling seamless data exchange between frontend and backend systems

Sales,Service
& Marketing
Cloud

Implemented and supported Marketing Cloud solutions using Journey Builder, Email Studio, and Contact Builder to deliver personalized, data-driven customer journeys

SOQL

Jira

Tested frontend applications using Cypress and performed performance and quality audits using Lighthouse, ensuring high reliability and user experience

Git

Actively collaborated with cross-functional teams using Monday.com for task tracking, sprint planning, and delivery coordination

Github
actions(CI/CD)

Supported DevOps workflows by contributing to CI/CD pipelines, source-driven development with Git, and automated deployments

Copado
devOps

Provisioned and managed cloud infrastructure using Terraform, supporting application environments, deployments, and system stability

Certificates

Adcorp Funxion-o - Woodmead

Feb 2021 – Feb 2022
Experiential Learner

AWS Solution
architect
associate

Customer Care Services | Feb 2022 – June 2024

Platform
developer 1

Provided customer support via phone, email, and chatbot platforms, assisting with ticket logging and query resolution.

Certified
Platform App
Builder

Attended training sessions on project management and business administration, developing foundational skills in client service and operations.

Certified
Salesforce
administrator

EDUCATION

- **Richfield Graduate of Technology, / BSc in Information Technology**
Pretoria — Feb 2021 – May 2024

Relevant Modules: Software Dev(C#, JavaScript, HTML/CSS), Data Mining, Big Data & IoT, AI,Operating System, DBMS,

Certified
Agentforce
specialist

Project

- **Denver Technical College / NATED–Certificates (Engineering & Electronics)**
Pretoria — Jan 2018 – Nov 2020
 Courses: Mathematics, Digital & Industrial Electronics, Instrument Trade Theory, Industrial Instrument, Engineering Science

management
 oracle multicloud
 architect
 professional

PROJECTS

1. Squadex Web App

Contributing to the development of Squadex Web App

A recruitment platform designed to streamline applicant tracking and job posting. Built key frontend features including the

file upload system and a Help icon to improve user experience, and

resolved critical bugs for smoother functionality. Implemented CI/CD

pipelines using GitHub Actions for continuous deployment, and provisioned AWS resources such as S3, SNS, SQS, Route 53, CloudWatch, and resource tags using Terraform, ensuring scalable, monitored, and reliable infrastructure.

LANGUAGES

English

Sepedi

Xitsonga

Zulu

2. Intern Tracking System(Salesforce)

Built a centralized Salesforce system for intern onboarding, training, and offboarding

- *Automated notifications and approvals using Flows and Scheduled Flows*
- *Developed Lightning Web Components for intern data and certificate uploads*
- *Implemented validation rules and permission sets for data integrity and security*

Smart Service Management

Project Overview: Smart Service Management App

The Smart Service Management App is a unified platform for managing customers, service requests, technicians, and feedback. It mimics a simplified Service Cloud, showcasing end-to-end Salesforce capabilities including data modeling, automation, Lightning Web Components, REST integration, and robust testing.

Key Features:

1. Data Model:

- **Customer__c:** Stores customer information
- **Service_Request__c:** Tracks service tickets with status, category, and priority
- **Technician__c:** Maintains technician details and skills
- **Work_Assignment__c:** Junction object linking service requests and technicians
- **Feedback__c:** Captures post-service feedback
- **Custom Metadata:** Stores SLA configurations per service category

2. Business Logic & Automation:

- **Triggers:** Auto-assign technicians to service requests based on category and region
- **Batch Apex:** Automatically closes completed requests older than 30 days
